

## **How to Update the Operating System on the M3**

This download contains a folder named "M3SYS".

Copy the "M3SYS" folder from your computer onto any USB storage device (MS-DOS formatted).

Important: Always back-up your sounds before doing an OS update. Be sure to save your PCG file to some form of USB media before proceeding, just in case. You can use the "Save PCG" or "Save All" commands found in Media mode.

### **Installing the new Operating System:**

- 1) Insert the USB storage device containing the [M3SYS] folder.
- 2) Turn the M3's power ON.
- 3) Select GLOBAL mode and execute the command "Update System Software" from the upper RH Page menu.

!!!CAUTION!!! DO NOT TURN OFF THE POWER DURING THE COMMAND EXECUTION.

- 4) The system will begin loading automatically.
- 5) When done, the display will read Completed. Please turn the power off, and then turn it on again. The M3 will start up using the new operating system.

Note: The message of "File/path not found" may be displayed when the command is executed.

Execute the install command again in that case.

If the error message "Error in reading from medium" or "Can't update system" is displayed, please redo the copying of the [M3SYS] folder to a USB storage device, making sure to first delete the folder from the USB device, and execute the install command again. If you still do not succeed, please try a different USB storage device, and redo the whole procedure.
